A total return bond fund that gives investors exposure across multiple fixed income sectors and a focus on total return.

Launched in 2010, Leader Total Return Fund has focused on maximizing total return potential through the ups and downs of bond market cycles. The Fund is a diversified portfolio of bonds across various fixed income sectors that is actively managed to maximize return and generate a high level of income.

A Broader Opportunity Set: The fund invests in a diversified portfolio fixed income securities across multiple asset classes, taking advantage of dislocations and opportunities across various sectors.

Opportunistic Approach: The Fund's experienced managers look for strategic entry points across asset classes and single securities.

Higher Income Potential: Access to a wider range of income opportunities means the fund may offer higher income potential than other short-term investments.

Hypothetical Growth of \$10,000

This chart assumes an initial investment of \$10,000 made on July 30th, 2010 for the Institutional Share Class. Performance assumes reinvestment of dividends and capital gain distributions.

***Portfolio characteristics represent 100% of the portfolio and will vary over time. Credit qualities are shown as a percentage of net assets. A bond rated BBB or higher is considered investment grade. This chart reflects the highest security rating provided by Standard & Poor's. Ratings and portfolio credit quality will vary over time.

Important Risks: Bonds offer a relatively stable level of income, although bond prices will fluctuate providing the potential for principal gain or loss. Intermediate-term, higher quality bonds generally offer less risk than longer term bonds and a lower rate of return. Generally, a fund's fixed income securities will decrease in value if interest rates rise and vice versa.

Mortgage-backed investments involve risk of loss due to prepayments and, like any bond, due to default. Because the sensitivity of mortgage-related securities to changes in interest rates, a fund's performance may be more volatile than if it did not hold these securities.

Foreign Investments can be riskier than U.S. investments. Potential risks include currency risk that may result from unfavorable exchange rates, liquidity risk if decreased demand for a security makes it difficult to sell at a desired price, and risks that stem from substantially lower trading volume on foreign markets. These risks are generally greater for investments in emerging markets, which are also subject to greater price volatility, and custodial and regulatory risks.
